SOLUTION HIGHLIGHTS

Intel[®] PFR protects against firmware attacks using an Intel[®] MAX 10 Field-Programmable Gate Array (FPGA).

Strict revision control is achieved through locked BOMs and resistor-level tracking to ensure an average 11- to 15-year lifecycle.

Lifetime support gives you unlimited access to our team of experts that help troubleshoot problems and offer solutions.

Intel[®] SGX includes predefined portions of memory that can better protect sensitive information.

Counterfeit Protection Program (CPP) helps Trenton detect, remove, and destroy counterfeit parts and components.

TAA compliance is achieved because Trenton manufactures BAM servers, and its other solutions, in the United States.

Intel[®] TME provides encryption of a computer system's physical memory.

Vetted supply chain helps protect your system from potentially compromised counterfeit electronic parts and components.

CSfC, ITAR, ISO9001, and AS9100 adherence and compliance allow Trenton to consistently provide secure, high-quality computing solutions.
